GlanceAI User Manual

Live interview copilot and teleprompter overlay for your desktop

Version 1.0.0
github.com/csinfo247/GlanceAI

GlanceAI is a desktop overlay that listens to a technical conversation, picks out the interviewer's questions, and streams a short, structured answer you can glance at and say out loud. It can also read coding problems off your screen and ground answers in your resume and the job description. Everything runs on your computer with your own API keys.

1 Requirements

Item	Notes
Node.js 20.16 or newer	Includes npm. Download from nodejs.org. Check with `node -v`.
Git	To download the project. Download from git-scm.com.
Chrome, Brave or Edge	Needed for the tab-audio extension that captures Google Meet, Zoom (web) or Teams (web) audio.
Operating system	Windows 10 (2004+) / 11, macOS, or Linux.

2 Installation

Open a terminal (PowerShell on Windows) and run:

```
git clone https://github.com/csinfo247/GlanceAI.git
cd GlanceAI
npm install
```

`npm install` downloads every dependency, including Electron (about 100 MB). If npm warns that Electron's install script was blocked, run `npm approve-scripts electron` and then `npm install` again.

3 API key setup

Service	Needed?	Where to get it	What it does
Groq	Required	console.groq.com → API Keys → Create API Key (free)	Generates every answer. Key starts with `gsk_`.
Deepgram	Recommended	console.deepgram.com → sign up → API Keys → Create a New API Key	Live transcription and Auto-Pilot. Without it, audio is only transcribed when you press Solve.
Google AI Studio	Optional	aistudio.google.com → Get API key	Last-resort fallback for screenshot questions when Groq is rate-limited.

Adding the keys to GlanceAI

1. Start GlanceAI (see section 4) and click the **gear icon** in the title bar.
2. Paste your **Groq key** and click **Save**. Optional: add backup Groq keys separated by commas (`gsk_..., gsk_...`). They are tried in order when one is rate-limited, and only help if they come from different Groq accounts.
3. Paste your **Deepgram key** and click **Save**. Optionally paste a **Google AI key**.

Keep your keys private. They are stored on your computer in `%APPDATA%\glanceai\glanceai-config.json` (Windows), `~/Library/Application Support/glanceai/` (macOS) or `~/.config/glanceai/` (Linux). Never share or commit this file.

4 Running GlanceAI

Command	What it does
`npm start`	Starts GlanceAI. Keep the terminal open: it shows the app's log messages.
`npm run dev`	Starts GlanceAI with developer tools open, for debugging.
`npm test`	Runs the offline test suite (no API calls).
`npm run bg` / `npm run stop`	Start in the background / stop it again (macOS and Linux only).

Windows, in the background: `Start-Process npm -ArgumentList "start" -WindowStyle Hidden`

5 First-time setup

Choose models and add your documents

1. In settings, keep the default text and vision model `qwen/qwen3.8-27b` and set **Response mode** to **Smart Adaptive**.
2. Pick your **code language** (C++, Python, Java or Go).
3. Drop your **resume** (.pdf, .docx, .txt or .md) on the resume box, then check the extracted text in the resume editor. Add the **job description** the same way.

Allow microphone and screen access

- **Windows:** Settings → Privacy & security → Microphone → allow desktop apps.
- **macOS:** allow the microphone prompt; enable Electron (or your terminal) under System Settings → Privacy & Security → Screen Recording, then restart GlanceAI.

Install the browser extension (captures call audio)

1. Open `chrome://extensions` and turn on **Developer mode** (top right).
2. Click **Load unpacked** and choose the `extensions/glanceai-tab-audio` folder.
3. With GlanceAI running, click **Copy Mobile** in GlanceAI settings, open the extension popup, paste the link into the **Pair** box and click **Pair**. The popup should show **Online** and **Paired**.

6 Using GlanceAI in a session

Before the call

1. Start GlanceAI and join the meeting **in the browser** (Google Meet, or Zoom / Teams via "join from browser").
2. On the call tab, click the extension icon and then **Stream Current Tab Audio**. Wait until the Tab badge in GlanceAI shows **Live**.
3. Check that **Auto-Pilot: ON** is shown in the bottom bar.

During the call

- **Questions answer themselves.** When the interviewer finishes speaking, the answer streams in within 1–2 seconds.
- **Read the top line first:** say the quoted sentence, then talk through the bold bullet points in your own words.
- **Ask your own question** by typing in the Ask box and pressing `Enter`, e.g. "give me the Java version".
- **Coding problem on screen?** Press the capture shortcut, or turn on **Auto-Watch** before the coding round.

Keyboard shortcuts

Windows / Linux use `Ctrl` + `Alt`; macOS uses `Cmd` + `Option`. They work even when GlanceAI is in the background.

Shortcut	Action
`Ctrl+Alt+S`	Answer the latest question now
`Ctrl+Alt+C`	Capture screen and solve the problem
`Ctrl+Alt+D`	Debug the failing test on screen
`Ctrl+Alt+P`	Pause Auto-Pilot while you speak
`Ctrl+Alt+N`	Toggle notch mode (pill under webcam)

Shortcut	Action
`Ctrl+Alt+H`	Hide / show the overlay
`Ctrl+Alt+M`	Toggle click-through
`Ctrl+Alt+X` / `Esc`	Clear the answer instantly
`Ctrl+Alt+[` / `]`	Decrease / increase opacity
`Ctrl+K`	New turn: start the next question fresh

Quick fixes

Problem	Fix
Tab badge stays on Standby	Start the stream from the extension popup on the call tab itself.
Tab badge shows Rejected	Reload the extension in `chrome://extensions` and pair it again.
"Rate limited" or slow answers	Wait 10–15 seconds, or add a backup Groq key.
GlanceAI disappeared or ignores clicks	Press `Ctrl+Alt+H` to show it, `Ctrl+Alt+M` to turn off click-through.
